

IoT-Based Smart Attendance System

Jabatan Teknologi Maklumat & Komunikasi (JTMK)

Project Title

IoT-Based Smart Attendance System

Group Members

Amirul Hakim

Nadia Rahman

Fatin Shazwani

John Tan

Project Objective

To automate the attendance process in classrooms using IoT devices for higher accuracy and reduced manual effort.

Project Description

The system uses RFID and facial recognition to detect student presence in class.

Attendance data is automatically logged and uploaded to a web dashboard accessible by lecturers.

This reduces the need for manual calling of names and prevents proxy attendance. Reports can be exported monthly.

Tools and Technologies Used

Raspberry Pi, RFID, Python, OpenCV, PHP, MySQL
